

Energy Policy

As a manufacturer of polyethylene and polypropylene film, Bareks A.Ş. commits to act in accordance with continuous improvement notion, and established principles for determining, implementing, and managing energy performance in all production processes and its cooperation with all stakeholders within the framework of energy management system.

The fundamental principles of energy management system are as follows:

Bareks AŞ;

- Within the framework of the energy management system, identifies, follows, and reviews the goals and targets, and provides essential knowledge, resources, and support to achieve those goals and targets.
- Identifies major energy consumption points and analyses the impact of the employees on those points. By providing all employees with the necessary skills for this purpose, carries out activities to create energy awareness.
- Establishes appropriate working environments and conditions to foster and maintain the core culture of energy-efficient working.
- Complies with all applicable national and international laws and regulations regarding energy efficiency, use, and consumption.
- Prioritizes the use of renewable energy sources.
- Establishes criteria for product and process design, present process structure, and future investments to improve energy efficiency. Manages sourcing activities in accordance with these criteria.

- Follows technological developments that will improve energy efficiency and minimize energy use.
- Establishes, documents, publishes, and reviews the procedures that will constantly enhance the organization's energy management system and this system's performance in line with the corporate vision and mission.
